Project Design & Scope

Idea: General Info website for Christian Church

Problem: There's a website made by the IT team of the regional administration board, but it doesn't meet the current needs of the church and it's design, UX/UI is horrible and partially broken.

Use case: Website to find info about the given church easily, incl. events; allow visitors to submit help/prayer requests and help others by donating money; help church members to keep track of any changes, updates or other important info about their church.

User stories:

User 1: where can I find more info about your church? Opening hours, etc.?

User 2: I want to study Bible. Do you offer any help with that? Any courses?

User 3: I don't want to come to your church services, but I'd consider other events. Do you have any?

User 4: I love what you do guys, I want to

donate some money to you. Do you have any ongoing projects or people in need?

User 5: I am a member of that church and I want to pay all my donations via bank transfer. Where can I find more details?
